

Professional Services | Performance Analysis

Take the performance of your websites, web applications and web services to the next level with Neustar Performance Analysis services. This consultative engagement includes a thorough review of your web infrastructure followed by detailed recommendations designed to achieve substantial, quantifiable gains in performance.

If you're looking for quantum improvements in site and application performance, but don't have the resources or expertise to dedicate to a thorough analysis to achieve your goals, Neustar Performance Analysis is the answer. Our experts have worked with hundreds of customers across various industries with a diverse range of needs to deliver outstanding results. We bring all of that experience to you in every engagement – combining our understanding of your unique needs with our breadth of experience, to offer you detailed recommendations that will achieve the results you need.

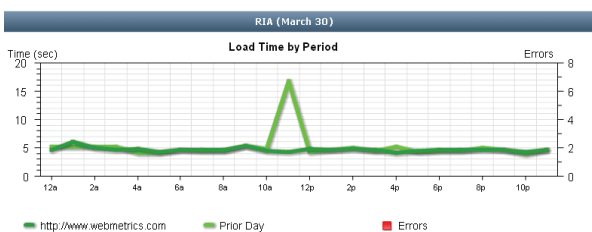

Neustar Performance Analysis services include website performance analysis, application performance analysis (multi-step transactions) and load test performance analysis services. Custom engagements can also be designed.

Project Summary and Milestones:

Upon start of a Performance Analysis engagement, you will be assigned a Professional Services Engineer whose goal is to understand your needs then analyze, test and provide specific recommendations to achieve your objectives. The Engineer will be your primary point of contact, handling all project management issues. At project kick-off, he or she will meet with you to learn more about your needs and objectives, gather requirements, and create a project plan. As the testing progresses they will review the performance data, analyze results, and create your performance analysis reports. At the end of the Performance Analysis engagement you will receive the results of your analysis in a summary document, which your Engineer will review with you thoroughly.

Milestones:

- Kickoff
- Information gathering
- Performance analysis
- Document delivery
- Review session

Typical Analysis Metrics:

Typical metrics included in your summary report are:

Application Source Code:

- Full page breakdown analysis
- JavaScript optimization
