

Neustar® Carrier Services Automated Carrier Ethernet Ordering

Streamline provisioning with multi-vendor ordering and workflow

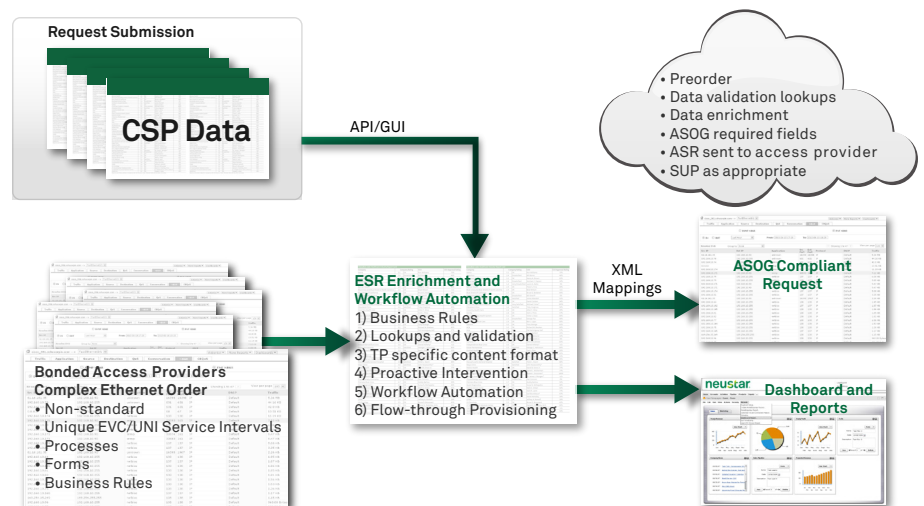

HIGHLIGHTS

- Builds one-to-many industry standard requests in the same order
- Complete workflow management provides guided order processing for low-touch, less manual progression through ordering stages
- Meets standards for Metro Ethernet Forum, Ordering and Billing Forum Access Service Ordering Guidelines and hundreds of carrier-specific business rules

As Communications Service Providers (CSPs) expand their offerings for Carrier Ethernet service to meet accelerating commercial and residential bandwidth demands, CSPs need efficient processes to provision service over multi-vendor networks. Neustar automates the ordering and provisioning of Ethernet service with a fully hosted and managed solution that connects you to the access vendors and providers that speeds order processing and reduces the time to bill for service.

Speed Order Completion with Automation

Neustar combines its hosted Access Service Request (ASR) with the Enhanced Service Request (ESR) workflow engine to minimize provisioning complexity with a standardized and simplified ordering interface for processing complex orders. Neustar manages and maintains the essential interconnections to your access vendors and access providers. Neustar ensure your orders comply with all industry and carrier-specific rules for efficient processing that speeds orders and reduces the time-to-bill.

10+ Years of Simplifying Order Management

Since 2003, Neustar has led the innovation for efficient order management with solutions that allow CSPs to lower costs through automation and with a universal interface that eliminates the need to maintain point-to-point gateways with multiple CSP trading partners.

In addition to CSP interconnections, the Automated Carrier Ethernet Ordering solution reduces errors using pre-order transactions to both enrich and validate information in the request to minimize manual intervention. Orders processed through the Neustar Clearinghouse meet all industry, forum and carrier-specific rules and guidelines. Importantly, you maintain control of your orders with full visibility into provisioning activity and status from pre-order through order completion.

Our hosted solution includes all maintenance and upgrades, reducing your IT and change management costs and risk. Fewer operational issues to manage allows your teams to focus on core business needs.

Feature	Benefit
Supports ASR pre-order and all order types	<ul style="list-style-type: none"> Orders comply with industry requirements Provides flexibility to expand your offerings Reduces training & provisioning costs
Pre-order validation, built-in industry and corporate business rule support and automated request/response validation	<ul style="list-style-type: none"> Improves order accuracy and reduce fallout Reduces cycle time and delays Speeds time to bill
ASR-Send API interfaces with trading partners while maintaining your market presence	<ul style="list-style-type: none"> Bonded with AT&T, Verizon, CenturyLink, Qwest, FairPoint, Frontier and Hawaiian Telecom
API with proven interoperability provides a single interface for flow-through provisioning	<ul style="list-style-type: none"> Reduces up-front investment and connectivity expenses associated with multiple trading partner interfaces
ASR Send / Receive integration	<ul style="list-style-type: none"> Electronic bonding with other Neustar customers
Full-featured, intuitive GUI pre-populates selected fields and includes Search, Order History and Message Detail	<ul style="list-style-type: none"> Multiple modes to access data Efficiently track and manage orders Automatic Trading Partner notifications
Automated coordination of component ordering, provisioning and turn-up	<ul style="list-style-type: none"> Saves costs as billing starts when the circuit is complete and operational
Workflow management provides guided, multi-stage processing that improves order accuracy and speeds processing	<ul style="list-style-type: none"> Determines due date intervals Data enrichment Business rule validation Fallout triggers Order status reporting
